DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-69, drawn to recombinant fungal cell, classified in class 435, subclass 254.4.
 - II. Claims 70-102 & 120, drawn to plasmid, classified in class 536, subclass 23.1.
 - III. Claims 103-117, drawn to method of making heterologous DNA and the heterologous DNA, classified in class 435, subclass 6.
 - IV. Claim 118 & 119, drawn to the cog sequence, classified in class 536, subclass 22.1.
 - V. Claim 121-127, drawn to the method of preparing a strain of fungus, classified in class 435, subclass 440.

2. Inventions Group I-V are each unrelated to each other. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Group I is drawn to a recombinant fungal cell such as *Neurospora* and unrelated to Group II -V because the fungal cell may be extensively in other biochemical and genetic manipulations such as gene expression and biochemical auxotrophic studies. Moreover, Group III method of making heterologous DNA may be applied to various

Art Unit: 1656

eukaryotic organisms other than fungi and Group I may be produced by standard DNA transfer methods other than transfection. Group II and IV may be used in other transfect into other organisms beside fungi. Group II is unrelated to Group I, II-V because the plasmid may be used extensively in other gene expression with a other genes such as into other types of eukaryotic and prokaryotic cells. Group III is different from Groups I, II, IV & V because Group III may be applied to a wide variety of cells beside fungi. Group IV is different from Groups I-III & V because the cog sequence may be studied in a extensive array of assays such as sequencing by probe arrays. Group V is different from Groups I-IV because in Group I the fungi may be made by other mechanisms such as natural mating and the other genes may be recombined into the fungi.

Because these inventions are distinct for the reasons given above and the search required for each Group is not required for other Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
